

Anjana Deivasigamani

📍 Boston, MA | (857)-453-9977 | deivasigamani.a@northeastern.edu | [LinkedIn](#) | [Github](#) | [Portfolio](#) | [Publication](#)

Education

Northeastern University, Boston, MA

GPA: 3.6/4.0

Master of Science - Data Science

Expected Dec 2025

- **Related Coursework:** Data Processing and Management, Database Management Systems, Supervised Machine Learning, Unsupervised Machine Learning, Data Mining, Natural Language Processing, Machine Learning Operations

Anna University, Chennai, IN

GPA: 8.5/10.0

Bachelor of Technology - Computer Science and Engineering

May 2023

Technical Skills

Programming Languages : Python, R, SQL

Databases : SQLite, MySQL, Oracle, MS SQL Server, DynamoDB

Data Services : Data Mining, Data Analysis, Data Pipelines, Database Design, Data Modeling

Libraries : Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, Keras, NLTK, Pytest, BeautifulSoup, Streamlit, joblib

Data Visualization & Analytics : Matplotlib, Seaborn, ggplot2, Tableau, Excel

Cloud & DevOps Tools : GCP, GCS, AWS, S3, Git, GitHub, Docker, Apache Airflow, CI/CD, FastAPI

Certifications : Oracle Database Programming with SQL, Fundamentals of Visualization with Tableau, Data Analytics and Databases on AWS

Academic Projects

🔗 SellerCentral Chatbot System | *Python, FastAPI, LangChain, LLaMA, FAISS, GCP, Airflow, Docker, GitHub Actions*

- Built a scalable AI-powered chatbot to assist Amazon sellers, using LangChain, LLaMA, and HuggingFace for contextual Q&A.
- Engineered an ETL pipeline with Airflow and Docker to process seller data, storing insights in BigQuery for real-time analytics.
- Integrated FAISS and VectorDBs for RAG-based semantic search; deployed microservices via FastAPI and Cloud Run.
- Automated CI/CD with GitHub Actions and built Power BI dashboards for seller performance and anomaly detection.

🔗 The Beauty of Safety – Toxicity Analysis of Cosmetic Chemicals | *R, Random Forest, LightGBM, ggplot2*

- Analyzed 110K+ beauty product records to identify toxic ingredients using public data from data.gov
- Engineered features based on chemical count, toxicity level, and reporting history; built Random Forest and LightGBM models with up to 97% accuracy
- Visualized chemical trends and risk patterns using ggplot2 and created a comprehensive public health report in RMarkdown

🔗 DineTrack – Restaurant Visit Analytics | *R, MySQL, Google Cloud SQL, ggplot2*

- Designed a normalized relational schema in MySQL to model restaurant visit data and deployed it on Google Cloud SQL
- Used R to connect, query, and validate the cloud-hosted database, performing analysis on revenue, customer visits, and product sales
- Generated a business intelligence report using RMarkdown with visualizations and statistical summaries for stakeholder insights

🔗 Customer Churn Prediction | *Python, scikit-learn, pandas, Streamlit, GridSearchCV, joblib*

- Built an end-to-end machine learning pipeline to predict telecom customer churn using demographic and usage data
- Preprocessed features with standard scaling and label encoding; handled class imbalance with stratified sampling
- Trained and compared Logistic Regression, Random Forest, SVM, KNN, and Decision Tree models using GridSearchCV
- Selected Logistic Regression as the best-performing model based on validation metrics and interpretability
- Deployed the final model in a Streamlit web app using joblib for real-time churn prediction

Experience

Xome Pvt. Ltd.

Chennai, IN

Full-Stack Developer Intern

Jan 2023 – July 2023

- Designed and developed an “Online Auction Management System” using ASP.NET Core MVC, supporting user registration, bidding workflows, and full auction lifecycle management.
- Built a web-based module to upload and parse Excel files using EPPlus, enabling validation and insertion of 10,000+ records into MS SQL Server.
- Developed and deployed .NET Core Worker Services for automated background processing of file uploads, data validation, and email notifications—cutting manual effort by 80%.
